BIOMAX INFORMATICS launches a major release of the BioXM™ Knowledge Management Environment with features for large-scale, global use

PLANEGG, Germany — (25 October 2013) — Biomax Informatics AG announces a new, major release of the BioXM Knowledge Management Environment. With its official launch on October 25th, BioXM version 5 represents the next generation of Biomax's premier technology platform. The new version provides powerful new functionality for large-scale, global user groups and lays the groundwork for future development.

Features for the internationalization of BioXM-built solutions, transparent handling of time zones and physical units, and the representation of users of the system as an integral part of the configured solution strengthen the capabilities of BioXM as a collaboration platform serving user groups in global organizations at multiple geographical sites. Seamless integration of relational database management systems, an expanded concept for high-throughput experiments, and a significantly enhanced portal system improve the BioXM platform for large-scale use.

"As our user community expands, we recognize the need to provide features for those acting on a global level," said Dr. Sascha Losko, Head of Product Management at Biomax. "BioXM v5 enhances those functions that allow our customers to get past the hurdles of globalization and focus on making the connections that make all the difference in their research."

BioXM version 5 is a full major release and immediately available; existing customers have already been upgraded. See http://www.biomax.com/bioxm for more information.

About the BioXM™ Knowledge Management Environment

The BioXM Knowledge Management Environment is a project-centered, distributed software platform that provides a central inventory of information and knowledge. Users create, manage and visualize scientific models as an extendible network of interrelated concepts. The BioXM platform facilitates communication and collaboration across research & development departments and integrates seamlessly into existing IT environments.

About Biomax

Biomax Informatics AG is a leader in the development of computational solutions for the life sciences. Biomax provides the BioXM™ Knowledge Management Environment and other computational solutions, including the Viscovery® data-mining technology, for better decision making and knowledge management in biomarker identification, patient stratification and targeted medicine. More information about Biomax is available at www.biomax.com.
